## Weather Disclaimer

The installation of photovoltaic solar panels is a weather-dependent process. While we make every effort to adhere to any pre-agreed schedules and pre-agreed installation dates, unforeseen weather conditions may result in delays or rescheduling for the safety of our installation team and the protection of your equipment.

Unforeseen weather conditions include (but not limited to):

- Excessive rain
- High winds, including regular gusts exceeding 25mph
- Thunder storms
- Lightning
- Heavy snow/snowstorms
- Continuous extreme temperatures exceeding 35 degrees celsius, subject to the location of the installation and the discretion of the installation engineers

Weather forecasts and wind patterns will be monitored on the days running up to the scheduled installation date. We will monitor these forecasts using, amongst others, the following services:

- Met Office
- BBC Weather
- Apple & Google Weather Applications
- Windfinder

In periods of extended unpredictable weather, an alternative installation date will be discussed and agreed upon prior to the commencement of any contract.

We reserve the right to postpone or halt any installation works at any time if weather conditions are deemed to be unsafe or unsuitable for the installation of solar panels and/or battery storage. Any changes to the schedule due to weather will be communicated promptly, and we will work with you to reschedule at the earliest available opportunity.

If you have any queries, questions or concerns, please contact your project coordinator at your earliest opportunity.
